1 Automation of industrial machinery

We provide automation solutions for manufacturing processes in the pharmaceutical, biotech and food industries. We approach projects with a multidisciplinary focus that includes the design of the technological process, the electrical and pneumatic systems, PLC programming, the design of the operation interface, integration with management systems, and technical documentation. We guide you in the manufacturing, installation, and commissioning stages of your technology.

We can automate:

- Chemical and biological reactors, formulation systems and tangential filtration systems.
- Freeze-drying machines, autoclaves, and ovens.
- Reverse osmosis water treatment plants, distillers, pure steam generators, storage and distribution systems for purified water and water for injection.
- Air handling units.
- Filling machines.
