Our services

## 4 Industrial Maintenance Management

Our service excels in designing and managing both reactive maintenance strategies, responding to failures, and proactive maintenance strategies, based on monitoring conditions and specific time periods.

We are skilled at implementing maintenance work systems in three scenarios:

**Corrective maintenance:** We specialize in repairing equipment or technological components promptly after a malfunction has occurred.

**Preventive maintenance:** Our scheduled maintenance approach ensures the upkeep of systems at regular intervals, irrespective of malfunctions.

**Predictive maintenance:** Through pioneering R&D projects, we employ data analysis and computational algorithms to prevent equipment failures. This innovative approach estimates potential failures and schedules necessary maintenance activities accordingly.

Our strategies are backed by a diverse team of engineers, and technologists, tailored to suit the unique design and criticality of your industry's processes and equipment.
